

Four Week Reset Program

Four Week Reset Program

Four-Week Reset Program

This program integrates fasting, nutrient-dense juices, and gradual transitions to solid food to support autophagy, detoxification, and metabolic health. Below is the corrected and consistent plan, including fasting windows, detailed schedules, and explanations of physiological processes.

Preparation Phase (3 Days)

Objective: Prepare the digestive system and begin eliminating waste.

Daily Schedule:

|||

| --- | --- | --- |

| Time | Action | Details |

| Morning | 1 glass of warm water with lemon | Stimulates digestion and hydration. |

| After Each Meal | Eat 5 prunes | Adjust based on bowel movements: |

||| - Frequent: Reduce prunes to 3-4. |

||| - Constipation: Increase to 6-7. |

| Day 3 Only | Undergo colonic or colon hydration | Prepares the colon for detoxification. |

What's Happening in the Body:

- Initial waste removal from the digestive system.
- Enhanced hydration primes the gut lining for nutrient absorption.
- Reduced bloating and preparation for Week 1 detoxification.

Week 1: Detoxification

Objective: Flush out toxins and prepare the body for deeper metabolic processes.

Daily Schedule:

|||

| --- | --- | --- |

| Time | Action | Details |

| Morning | 16 oz (500 ml) of Kat's JOL | Provides hydration and nutrients. |

| Midday | 16 oz (500 ml) of Kat's JOL | Maintains energy and promotes detox. |

| Afternoon | 16 oz (500 ml) of Kat's JOL | Final serving to conclude eating window. |

Fasting Window: 16 hours of fasting and 8 hours for eating.

What's Happening in the Body:

- 0-12 Hours: The body clears immediate toxins and relies on glycogen for energy.
- 12-16 Hours: Glycogen stores are depleted, signaling the body to transition to fat-burning.
- Autophagy Begins (16 Hours): Damaged cells are recycled, inflammation decreases, and the immune system

strengthens.

Week 2: Cellular Repair

Objective: Deepen autophagy and ketosis to enhance cellular cleaning and regeneration.

Daily Schedule:

||||

| --- | --- | --- |

| Time | Action | Details |

| Morning | 16 oz (500 ml) of Kat's JOL | First serving within the eating window. |

| Midday | 16 oz (500 ml) of Kat's JOL | Maintains energy levels. |

| Afternoon | 16 oz (500 ml) of Kat's JOL | Final serving to conclude the window. |

Fasting Window: 20 hours of fasting and 4 hours for eating.

What's Happening in the Body:

- **Fat as Fuel:** The body shifts into deeper ketosis, using fat stores as the primary energy source.
- **Cellular Cleanup:** Prolonged autophagy breaks down damaged organelles and proteins.
- **Anti-Inflammatory Effects:** Ketosis reduces inflammatory markers and enhances immune efficiency.

Week 3: Transition to Solids

Objective: Gradually reintroduce solid foods while sustaining fasting benefits.

Daily Schedule:

||||

| --- | --- | --- |

| Time | Action | Details |

| Morning | 16 oz (500 ml) of Kat's JOL | Starts the day with hydration and nutrients. |

| Midday | Light solid food (e.g., salad or steamed veggies) | Reintroduces easily digestible foods. |

| Afternoon | 16 oz (500 ml) of Kat's JOL | Final serving of the day. |

Fasting Window: 16 hours of fasting and 8 hours for eating.

What's Happening in the Body:

- **Digestive System Reawakens:** Light solids prevent strain while supporting gut microbiota balance.
- **Sustained Autophagy:** Fasting periods continue to promote cellular repair.
- **Ketosis Continuation:** The body efficiently burns fat and maintains an anti-inflammatory state.

Week 4: Full Transition to Balanced Solids

Objective: Transition to nutrient-dense solid foods, veggie soups, and supportive supplements.

Daily Schedule:

||||

| --- | --- | --- |

| Time | Action | Details |

| Morning | 16 oz (500 ml) of Kat's JOL or Veggie Soup | Begins the day with nutrient-dense liquids or light solids. |

| Midday | Nutrient-dense solid food (e.g., lean protein with lightly steamed vegetables) | Provides energy and sustenance. |

| Afternoon | Light snack (e.g., nuts or yogurt) or Veggie Soup | Ends the eating window with nutrient-rich options. |

Fasting Window: 16 hours of fasting and 8 hours for eating.

What's Happening in the Body:

- Nutrient Support: Supplements and vegetable soups provide essential vitamins and minerals for sustained health.
- Metabolic Stabilization: A varied diet reinforces energy levels and digestive health.
- Long-Term Maintenance: Balanced habits are cultivated to ensure lasting health benefits.

Healing Overview Table

||||

| --- | --- | --- |

| Week | Key Process | Physiological Benefits |

| Preparation | Digestive system priming | Improved nutrient absorption, reduced bloating, and colon health. |

| Week 1 | Detoxification | Eliminates toxins, reduces inflammation, and prepares the body for cellular repair. |

| Week 2 | Cellular Cleanup | Deep autophagy and ketosis reduce oxidative stress and enhance mitochondrial efficiency. |

| Week 3 | Digestive Reintroduction | Gut health restored; cellular repair continues. |

| Week 4 | Metabolic Stabilization | Sustained energy, improved insulin sensitivity, and long-term health benefits. |

This updated program ensures accurate representation of Week 4 with veggie soups, supplements, and clear guidelines for transitioning to solids. Let me know if further refinements are needed!
